Abstract

On September 12, 2026 the chief executive of ChemicalQDevice wrote to President Trump about three priority changes for the chief executive and the startup: obedience over hard work and responsibilities; adaptation to existing authority, order, and structure; and a teamwork-based early-rise, scheduled routine. Several communications from the White House followed. This packet answers them.

It answers by turning each priority into an operating rule a counterparty can check. When an office that owns a rule answers, the company follows the answer before doing more of its own work. The company takes the

role an existing structure offers, even when that role is smaller than the one it asked for. And its working day begins at 5:00 a.m. Pacific, so that its correspondence arrives at the start of Washington's day. The White House is answered through its own contact form [1], and four letters then offer a contributor's place inside four established structures: the federal science and technology agenda coordinated by the Office of Science and Technology Policy [2], the Department of Energy's Genesis Mission [3], the academic cancer center that would hold the trial, and the National Cancer Institute's investigator-initiated pathway [4].

None of the four letters asks to lead, to be funded, or to be endorsed. The packet closes with the decisions inside the robotic Phase 1 and who holds each, which is the same principle applied to the trial itself: every investigator decision sits with the site, and the company keeps only the signature a sponsor cannot delegate.

How to read this

A reader with five minutes takes §1, the message and the three rules, and §2, the action register with the path a letter follows under those rules.

A reader asking where the company stands takes §3, the structure map, and §4, the early-rise weekday block by block.

A funder takes §5, the decisions inside the Phase 1 and the evidence behind it. §6 carries the positioning constraints, the method, and the references, every one of which is a clickable link.

1 The Message, and the Three Rules It Became

1.1 The message, quoted as sent

Dear Mr. Trump,

I am thankful for some humbling life circumstances leading to priority changes for myself and the startup which include:

- 1) Obedience over hard work and responsibilities.
- 2) Adapted to existing authority, order, and structure.
- 3) Acclimated to a teamwork based early-rise, scheduled routine.

Sincerely,

CEO Kevin Kawchak

ChemicalQDevice

September 12, 2026

Several communications from the White House followed. Their text is not in the repository, and this packet neither quotes nor paraphrases them. They are facts about correspondence: not an award, an appointment, an endorsement, or a commitment, and nothing here describes them as one.

1.2 Why each priority needs a rule

A priority stated in a letter is a promise, and a promise a counterparty cannot check is worth what the counterparty chooses to believe. A small company cannot afford to depend on belief, so each priority is restated in Table 11 as a rule, beside the behavior that shows the rule is being kept.

1.3 The first rule, already kept once

The first block of funding actions wrote to the National Cancer Institute's Cancer Therapy Evaluation Program as a company bringing a concept. The branch chief answered that the program's trials are investigator-initiated, so a concept that originates with a company is the wrong shape by construction [4, 5]. The company did not argue. It rewrote its approach around the structure it had been shown, and day 3 of this block carries that rewrite to the academic cancer center that would hold the trial. That is the first rule, kept before it was written down.

Priority, as written	Operating rule	Evidence a reader can check
Obedience over hard work and responsibilities	Follow the answer of the office that owns the rule before doing more work	Each letter asks the rule's owner first, then waits
Adapted to existing authority, order, and structure	Take the role a structure offers, even when it is smaller	Four letters, each offering a contributor's place
Acclimated to a teamwork based early-rise, scheduled routine	Start at 5:00 a.m. Pacific on a fixed timetable for the whole team	Letters go at 6:00 to 8:00 a.m., Washington's morning

Table 11. The three priorities in the words of the September 12 message, each set beside the operating rule it becomes and the behavior that shows the rule is kept.

1.4 The standing fact

The trial those structures would hold is built around daraxonrasib, which the FDA approved on August 26, 2026 as Rasonque for metastatic pancreatic adenocarcinoma after prior systemic therapy [6, 7, 8]. The approval followed Revolution Medicines' Phase 1/2 program and its Phase 3 RASolute 302 trial [9, 10, 11]. ChemicalQDevice's AI papers on the molecule were developed independently of that program and simultaneously with it, from the June 2025 identification study [12] to the Phase 1 protocol and investigational new drug application of 2026 [13, 14]. The perioperative use the company's protocol proposes remains investigational.

2 The Action Register

Table 12 lists the day's seven actions in the order they are done. The White House form goes first, because letter 1 says it has been submitted. The CTEP follow-up goes after the letter to Moores, because it reports that letter as sent.

No	Action	File	Waits on
1	Submit the White House contact form	form-01	Nothing
2	Write to OSTP	email-01	Row 1
3	Offer a contributor's place, Genesis	email-02	Nothing
4	Offer a contributor's role, Moores	email-03	Nothing
5	Follow up in the CTEP thread	email-04	Row 4 sent
6	Adopt the early-rise weekday	brief-03	Nothing
7	Run the quarter-end policy review	capital-03	The quarter's last session

Table 12. The day's seven actions in the order they are done, each with the file that carries it and what it waits on; the White House form is submitted before letter 1.

2.1 How one letter moves under the three rules

Every letter this block sends, and every reply it receives, follows the same path. Figure 9 draws that path across the three parties it touches: the office that writes or answers, the chief executive, and the repository record. The one decision on the path is the first rule in action: if the company does not own the answer, the letter goes to the office that does.

Figure 9. The path every letter follows across three lanes, with one decision that sends a question to the office that owns its rule before the company acts on it.

2.2 What each letter asks

The OSTP letter asks only which office is the right place for a small company to offer service under direction [2, 15]. The Genesis Mission letter asks whether a small business can join a laboratory-led team as a subcontributor, and whether clinical research is in scope [16, 17]. The Moores letter offers the advisory software component to an investigator, under the university's procedures and contracting route [18, 19, 20]. The CTEP follow-up reports one fact and asks for nothing [4]. The OSTP letter also copies the Office of Personnel Management's AI workforce team, because the federal AI workforce programs are the other structure where a small AI company could serve under direction [21, 22].

2.3 A note on the date

September 30 is the last day of the federal fiscal year. If appropriations lapse at midnight, some federal offices written to this week may not answer for a time. Silence in that case is expected, and the three-business-day rule is counted in days the recipient's office is open.

The one approval this day asks for

Approve answering the White House through its contact form and the Office of Science and Technology Policy, and placing the company, by letter, inside four established structures as a contributor rather than a lead. Adopt the early-rise weekday as the team's schedule from the next business day.

3 The Structure Map

The second priority is adaptation to existing authority, order, and structure, and a company cannot adapt to a structure it has not drawn. Table 13 names each authority the program touches, what that authority governs,

Figure 7. The federal part of the structure map as a directed tree, with every edge pointing down to the company, which sits at the bottom as a contributor.

and the place the company takes inside it. In every row the company's place is smaller than the authority's, and that is the point of the table.

Authority	What it governs here	The company's place
President, through OSTP	Science and technology policy	A correspondent
DOE, Genesis Mission	Laboratory-led AI-for-science teams	A prospective subcontributor
FDA, Oncology Center	Oncology review; its AI program	An inquirer about venue
FDA, drug center	The IND for perioperative use	Sponsor of record, if filed
FDA, combination products	Which center leads the review	A future applicant
NIH, NCI	Investigator-initiated trials; SBIR	Contributor; SBIR applicant
NSF	The SBIR program and its pilots	A Project Pitch applicant
UC San Diego IRB, Moores	Human subjects review; site conduct	Investigator's contributor
SEC	Securities markets; any Form D	Correspondent; future filer
California	Employment, payroll, site permits	An employer, when it has one

Table 13. The ten authorities the program touches, what each governs, and the company's place inside each; in every row the company's place is the smaller one.

3.1 The same map, drawn as a tree

Figure 7 draws the federal part of the map as a directed tree, with the company at the bottom and every edge pointing down to it. The Securities and Exchange Commission is drawn with a dashed edge because it is an independent agency, and the Office of Science and Technology Policy is drawn beside the agencies rather than above them because it advises and coordinates rather than directs.

3.2 Three rules the map implies

Every investigator decision sits with the site. The company's chief executive holds all of the sponsor, and so holds none of the decisions an interested party could move. §5 lists them.

No authority is asked to do another's work. The Securities and Exchange Commission is not asked to judge clinical research, and the Cancer Therapy Evaluation Program is not asked to fund a company concept. Each letter in this block is addressed by that rule.

The company's place is stated in writing before it is taken. Each letter to a structure says which place the company is offering to take, so that no structure has to infer it. A row of Table 13 changes only when an authority answers, and then it changes to the authority's own words.

4 The Early-Rise Weekday

The third priority is a teamwork-based early-rise, scheduled routine. The reason for the early start is practical. Washington is three hours ahead of La Jolla, so a letter sent at 6:00 a.m. Pacific arrives at 9:00 a.m. Eastern, at the top of a federal working day, and a reply received by 2:00 p.m. Pacific can still be answered before that day ends. Table 14 sets out the day block by block, in both time zones.

Pacific	Eastern	Block	What happens
5:00 to 5:30	8:00 to 8:30	Start	Read overnight replies
5:30 to 6:00	8:30 to 9:00	Approval	Approve or hold the day's actions
6:00 to 8:00	9:00 to 11:00	Federal window	Letters to federal offices
8:00 to 11:00	11:00 to 2:00	Technical work	Protocols, code, packets
11:00 to 12:00	2:00 to 3:00	West Coast window	California institutions
12:00 to 12:30	3:00 to 3:30	Break	None
12:30 to 2:00	3:30 to 5:00	Second federal window	Same-day answers
2:00 to 3:30	5:00 to 6:30	Build and commit	Everything written is committed
3:30 to 4:00	6:30 to 7:00	Record	File the day; stage tomorrow

Table 14. The early-rise weekday in Pacific and Eastern time, block by block, from a 5:00 a.m. start to a 4:00 p.m. record, with two federal correspondence windows.

The weekday has the same shape every day. What changes is the theme of the two federal windows, which follows the weekly cadence the first block of funding actions set [5]. Figure 8 lays the week out as a grid, so that a new team member can see in one look where every hour of every day goes.

4.1 The five team rules

Every team member keeps the same start, the same windows, and the same record time. Nothing leaves the company before the 5:30 approval block has passed it. No follow-up is sent inside three business days of the letter it follows, counted in days the recipient's office is open. A reply received after 2:00 p.m. Pacific is answered the next morning in the federal window, not in the evening. And the record block is never skipped, because a letter with no record is a letter nobody can reconstruct three weeks later.

4.2 The team the routine is for

The company has one member today and two unsolicited applicants, and each reply on day 1 told the applicant about the schedule before anything else about the role. The routine is written for a team before there is one, so that the first people to join are joining a structure rather than building it.

d2-type / timetable grid, blocks against weekdays

One week, one timetable

Pacific time	Monday	Tuesday	Wednesday	Thursday	Friday
5:00 Start	Read replies	Read replies	Read replies	Read replies	Read replies
5:30 Approval	Approve	Approve	Approve	Approve	Approve
6:00 Federal	Program offices	Regulators, capital	Sites, structures	Pilots, solicitations	Follow-ups, record
8:00 Technical	Technical work	Technical work	Technical work	Technical work	Technical work
11:00 West Coast	Institutions	Institutions	Institutions	Institutions	Institutions
12:00 Break	Break	Break	Break	Break	Break
12:30 Federal	Program offices	Regulators, capital	Sites, structures	Pilots, solicitations	Follow-ups, record
2:00 Build	Commit	Commit	Commit	Commit	Commit
3:30 Record	Record	Record	Record	Record	Record

Federal windows, by weekly theme
 Technical work and commit
 Record, never skipped

Figure 8. The early-rise week as a timetable grid, with the two federal windows carrying each day's theme and every other block identical from Monday to Friday.

5 Authority Inside the Robotic Phase 1

The same principle that places the company below every structure it writes to also governs the trial itself. The chief executive holds all of the sponsor, so every trigger in the federal financial disclosure rule would fire if the same person held an investigator's role as well. The site package therefore places every decision an interested party could move with a role at the site, and leaves the company only the signature a sponsor cannot delegate [23]. Table 15 lists the decisions and who holds each.

5.1 The trial those decisions govern

The deposited protocol is an open-label, single-arm, 3+3 dose escalation of perioperative daraxonrasib at 160, 220 and 300 mg, with a 28-day dose-limiting toxicity window, in up to 18 treated participants with resectable or borderline-resectable KRAS-mutated pancreatic ductal adenocarcinoma [13]. The procedure is a staged eight-arm robotic pancreaticoduodenectomy with 56 degrees of freedom and 640 sensor channels, force limits of 3 N per arm and 18 N cumulative, and a five-vessel no-fly gate. An on-premises language model is confined to advisory output, with no write credential to data capture and no route to the robot control network [14]. The investigational new drug application it would be filed under follows 21 CFR Part 312 [24].

Decision	Held by	Why it sits there
Dose assignment in the 3+3 rule	Biostatistician	The only discretionary step
Dose-limiting toxicity calls	Site and sub-investigator	Decides if escalation continues
Analysis plan, database lock	Biostatistician	Decides what the trial reports
Consent and eligibility	Investigator, coordinator	Participant safety starts here
Use of the model's advice	The operating surgeon	The model is advisory only
Emergency stop chain	Site safety officer	3 ms arm stop; 500 ms system stop
Regulatory signature	Chief executive	A sponsor duty, never delegated

Table 15. The seven decisions inside the robotic Phase 1 and the role that holds each; the company keeps only the regulatory signature a sponsor cannot delegate.

5.2 The evidence behind the choice of agent

The agent was chosen on a dated, quantitative record. In August 2025 the company's ten-arm simulation returned a median overall survival of 12.8 months against 5.4 for chemotherapy [25]. In May 2026 the developer's Phase 3 trial reported 13.2 months against 6.6 in the RAS G12 population of previously treated metastatic disease [11]. The two figures are close, and the company describes that closeness as a chronology rather than a validation, because the populations, regimens and sample sizes differ. Pancreatic ductal adenocarcinoma remains the disease with the widest gap between incidence and survival in the United States [26], and the standard of care after resection remains combination chemotherapy [27].

5.3 The money the decisions would spend

The program's direct cost is \$700,000 a year for five years, of which \$521,000 is personnel across 3.95 full-time equivalents [23]. The SBIR route of \$306,000 in Phase I and \$1,300,000 in Phase II totals \$1,606,000, and the capitalization plan places \$5,900,000 of private capital behind a firewall against the \$2,104,000 delta the route does not buy [28]. The company's comparable virtual trial work is **projected** at \$36,330 per run, a figure that describes simulation work already deposited and not the cost of the clinical trial.

6 Positioning, Method, and References

6.1 Positioning constraints

The September 12, 2026 message is quoted exactly as it was sent. The White House communications that followed are facts about correspondence; their text is not in the repository, and nothing in this packet quotes, paraphrases, or describes them as an award, an appointment, an endorsement, or a commitment [1].

No agreement of any kind exists with the Department of Energy, the Office of Personnel Management, UC San Diego, Moores Cancer Center, the National Cancer Institute, or any other institution, and none is described as a partner, sponsor, site, or endorser [16, 18, 4]. The company offers a contributor's place in each structure and has been accepted in none. The operating rules in §1 are the company's own; no office has approved them.

Rasonque is approved for metastatic pancreatic adenocarcinoma after prior systemic therapy [6], and the perioperative use this program proposes remains investigational. No investigational new drug application has been submitted, and no patient has been treated. Nothing in the day's capital instruction is investment advice.

6.2 Method and reproducibility

This packet was produced from repository sources and from the public pages of the offices it writes to: the message from the block's own prompt record; the contributor-not-sponsor position from the first block of funding actions [5]; the decisions and their holders from the site package [23]; the trial design from the deposited protocol and investigational new drug application [13, 14]; the federal policy position from the report the program's applications are written against [29, 30]; and the money frame from the capitalization plan [28]. Every recipient address was checked against the page its office publishes.

The three figures are drawn in TikZ from the specifications in the day's `diagrams` directory, one each in the Graphviz, D2 and PlantUML vocabularies, and no raster image is used anywhere. Three frontier models divide the work in this company's practice [31]. The human author retains responsibility for every conclusion, and this document was adapted using Claude Code Opus 5.5 [32].
